Ethernet disconnects for 1-5 seconds then reconnects briefly after. - [Solved]  
2019/07/17

Hello! My PC is hard wired along with 2 other PCs. Only my computer's been disconnected for a second or so and then reconnects briefly after. I tried different wires but it's been the same with all of them. I suspect I have a software issue of some sort because of a possible recent Windows update. I reverted it to a time before the update once before but I'm not sure if it updated again and I'm just not able to go back and fix it. Please help me!

## cell phone gps wifi signal jammer
