Setting up a router to use cabled internet.

2019/07/06

Okay description for title probably wasn't the best, but basically I have bought a holiday home that does have internet but basically to have it work I have a long range WIFI receiver that pugs into USB and that works great downloading at like 6/7mb/s... Anyway I currently use software from the computer so i can use wifi If i use windows 10 sharing it just crashes and is useless so i use a program called connectify which works TO A POINT.. its a bit finicky.. anyway I want t know if there's a way to plug a router into the ethernet socket on my pc, so that the router can share the internet? Any help would be great received.

## **cell phone signal jammer for business**
