Internet connection drops when GPU under load - [Solved]
2019/07/28

I've had the same setup for about 2-3 years now, but starting last week, I've been getting connection drops whenever my GPU is under load. Regular downloading, streaming, installing games, etc. all work at normal speeds, but any multiplayer game I play causes my download speed to dip to basically 0, eventually disconnecting me from the lobby. It instantly reconnects as soon as I leave an active game (I don't even have to close the game, just disconnect from the game in progress). I can alleviate this disconnect issue by turning all my graphics to lowest, whereby I can stay connected but with frequent lag spikes and generally poor connection. I originally thought the GPU might be sapping too much power so I upgraded my PSU, but that hasn't solved the issue. I'm out of ideas...replace wifi card maybe? Even though it works perfectly when the GPU isn't being taxed?
