Ethernet disconnects for 1-5 seconds then reconnects briefly after. - [Solved]
2019/07/11

Hello! My PC is hard wired along with 2 other PCs. Only my computer's been disconnected for a second or so and then reconnects briefly after. I tried different wires but it's been the same with all of them. I suspect I have a software issue of some sort because of a possible recent Windows update. I reverted it to a time before the update once before but I'm not sure if it updated again and I'm just not able to go back and fix it. Please help me!

cheap phone signal jammer
