Create my own Internet Service from my ISP

2019/07/24

I don't know if it's possible or not possible, but I think about this and don't find any solution or idea to respect. The question is how to share my connection with my actual ISP and give or share my internet connection with other people or use my connection with my mobile but outside from my house, and also have connection using only my internet service with my ISP. For example I have service with ISP "X", and have my modem router and also I use my ASUS router in bridge mode, and I want to create the same as APN for shared and give access to internet to other people in other place or country, or let my smartphone connect to my connection using my router, for get internet access and don't need data connection from other ISP, for mobile internet access, the same as internet remote service. I don't know if I understand my idea but basically I want to use my ISP connection for get internet with my own connection in other places and with all my devices and don't need other companies, for example I read something about this here :
